

Solution brief

What's New in Projectplace May 2017

With the May release of Projectplace, we are continuing to innovate in collaborative work management, specifically in Workspaces for all types of work.

Highlights of this release include:

- Roadmap Workspaces
- Team Overview
- Performance enhancements

Roadmap Workspace Enhancements

Time Reporting

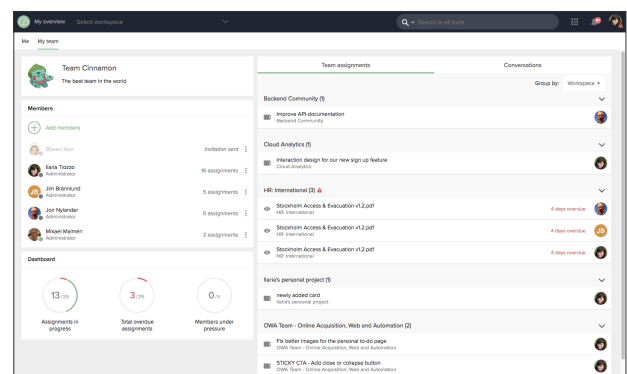

As promised, Projectplace is continuing to enhance its recently released Roadmap Workspace. In this release you will have the ability to report time against your roadmap activities. As your team members execute and deliver on work, they can now report their time back to roadmap initiatives for improved tracking of estimates and actuals against long-term, strategic objectives.

Access Rights

Provide security and flexibility for workspace administrators with Projectplace's new roadmap access rights model. Limit or revoke access for any workspace member to improve the privacy of your long-term plans.

Team Overview – Dashboard

Within our new Team Overview, team members can now visualize key summary metrics around the state of their team's work. The new dashboard enables team leaders and members to easily identify work in progress and overdue while understanding team member workload levels. This allows your team to quickly realize and combat any bottlenecks in efficiency.

Bug Fixes

Our objective at Projectplace is to provide a performant place to collaborate and execute on work with your teams. Over the last month we've been working hard to fix a number of bugs in the tool. Be on the lookout for the following improvements:

- Add a date to personal tasks on 'My Overview'
- Member invitation bugs fixed
- Updates to documents are now respected in the workspace as well as its associated template
- Export Plan and Board include all expected data (NOTE: Exported plans will be emailed to user)
