

## Solution brief

# What's New in Projectplace December 2016

With the December release of Projectplace, we are pleased to introduce a number of improvements that will enhance the experience for all of our users.

## Request enhancements

In our latest release, we have added more flexibility to requests and how they are converted into workspaces. When approving a request, it is now possible to create a workspace using an available template. Additionally, the cost code and department fields are available on each workspace. These new options provide project managers with a more efficient workspace creation process when handling requests.

**Create Project** [X]

Name\*  
Project for implementing Innotas customers

Description\*  
We'd like to set up a template project to get an overview of How an Innotas Implementation will look like; overall time plan w milestones, phases, tasks to execute, reference documents, communication groups etc

Cost code  
Add cost code

Department  
Choose department [v]

Template  
Create from template [v]

\* required field      Cancel      **Create Project**

## Recent documents

Back by popular demand! One of the most common suggestions we have received since our October launch is to bring back the Recent documents functionality. With this release, users can access their recent documents in the My Overview screen.

## Other improvements

This release contains a number of additional bug fixes and performance improvements, including a major stability update to the documents plugin for Mac users.
