

Solution brief

What's New in Projectplace July 2016

The July 2016 release of Projectplace brings a first installment of the new Project Requests tool. This feature enables Enterprise customers to manage the intake of project requests. The main benefits are:

- Capture requests and ideas from within and outside the organization
- Manage approvals of requests into projects

Project Requests

Organizations can now offer external requestors as well as internal stakeholders the ability to submit requests for new projects to be executed in Projectplace. Administrators can evaluate these requests and inform the requestor about the status of their requests.

The Request tool features:

- Configurable request form to enable submission of project ideas and request projects
- Ability to provide request form access to internal and external parties without requiring a Projectplace license
- An interface for administrators to evaluate, approve and reject project requests based on the input provided
- Upon approval, easily convert project requests into projects within your Projectplace account

The Request tool is available for administrators under the Project office.

We are making Projectplace even better!

Big changes and enhancements are on the horizon for Projectplace. Soon to arrive in the upcoming releases:

- Closer connection between activities and cards to provide even better ways to plan and work
- New, intuitive and modern look & feel making it easy to find your way around in the product
- Usability enhancements that increase team engagement and productivity

More information to follow via email and in Projectplace later.

Stay tuned!
