

Solution brief

What's New in Projectplace May 2016

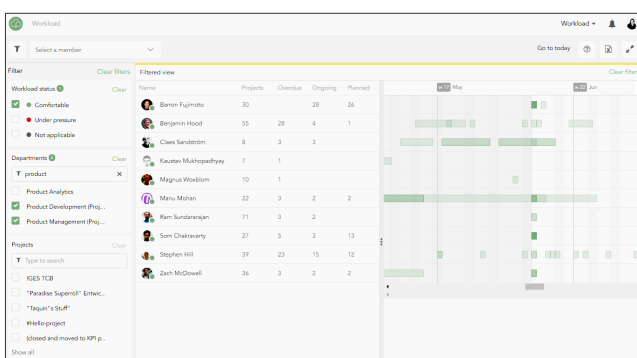

The May 2016 release of Projectplace brings several enhancements to the service. The highlights are:

- Next generation Workload
- Android app improvements

Next generation Workload

Since its introduction, Workload in Projectplace has become a very valued feature for our Enterprise customers. This powerful feature provides managers and team leads with unique insights to inform decisions around the distribution of work among team members.

This release provides a completely new look and feel for the Workload tool with easy and consistent ways of finding information and access to different functions, including more advanced filtering functions for workload information and the ability to use multiple filters.

Project report from the Status tab

Project managers whose project is part of a portfolio and who report on KPIs can now download the current report in Word format. Use this capability to inform stakeholders who cannot access portfolios in Projectplace or to keep a log of historic reports. You will find the Download report-button in the Status tab of your project.

Focus on current activities in the Android app

A new view in the Android app highlights only the activities that are currently ongoing, enabling users to get an overview of the most important current tasks.

We are making Projectplace even better!

Big changes and enhancements are on the horizon for Projectplace. Soon to arrive in the upcoming releases:

- Closer connection between activities and cards to provide even better ways to plan and work
- New, modern look & feel with the most intuitive way to find your way around in the product
- Usability enhancements that increase team engagement and productivity

More information to follow via email and in Projectplace later.

Stay tuned!
