

Solution brief

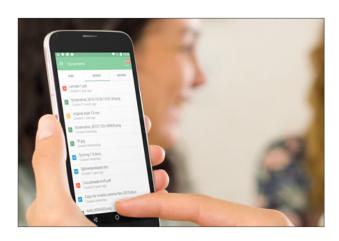

What's New in Projectplace

The November 2015 release of Projectplace enhances the mobile aspects of the product for greater user experience. Some of the highlights are:

- Document management in Android app
- My overview and personal tasks in iOS app
- Time reporting on cards

Android app

Document overview is now available in the Projectplace Android app. This gives team members access to a more complete Projectplace experience in Android. The app also includes seamless task management in Kanban boards and personal task management. For a greater and more complete experience, users of the old Android Document Management app (Projectplace Docs) should download the new Projectplace Android app (Projectplace).

iOS and Android apps

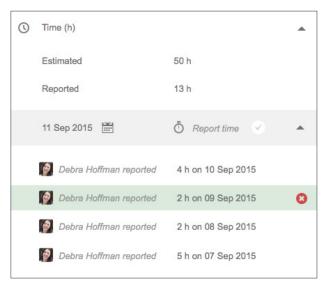

My overview and personal tasks are now also available in both the iOS and Android apps, providing users with a more complete experience and enabling them to organize their tasks. The overview provides a great way of staying on top of your work/tasks in Projectplace – personal as well as collaborative.

Time reporting on cards

Reporting time on cards gives project managers a clear view of actual vs. estimated time in the project. Project managers can quickly check for bottlenecks, potential risk of delay, discuss commitments and work situations within teams and with individuals to form the basis for decision-making and potential redistribution of work.

Added to the previously released time estimates on cards is time reporting of actual time. Time reported on cards is automatically aggregated to the top level of the project, enabling project managers to quickly assess the actual time team members spend on tasks.

It is now also possible to estimate and report time on cards that are not connected with an activity in the Gantt plan.

Workload management

Workload management in Projectplace enables selected users to gain visibility of commitments across all projects: who is working on what, the resource workload at any given point of time, and who might be available for additional work.

We have enhanced the user experience and usability by making it possible to export workload information into Excel. It is also now possible to link directly to cards from within the Workload view.

Also, project members are currently able to provide immediate feedback on the level of their work demands. We have enhanced this feature with the reminder for team members to self-assess their workload. Team members can now choose whether they feel 'comfortable' or 'under pressure' about their workload, and will one week later be reminded to update their status.
