

Solution brief

What's New in Projectplace April 2016

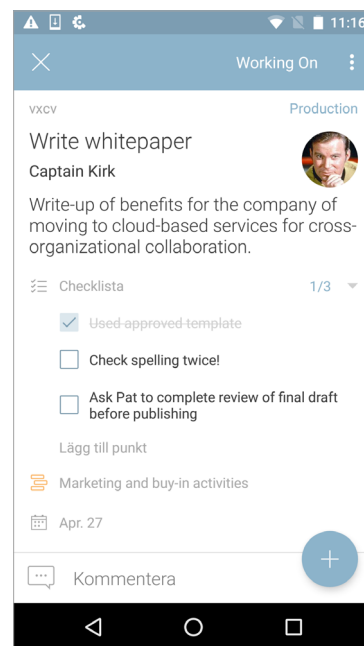

The April 2016 release of Projectplace brings:

- More options for printing the plan
- New ways to stay productive on your Android device

Sharing your plan on paper – more options

To better support the need to print out the plan or display it in physical form, we have introduced new printing options. You can now scale the printout to larger formats, such as A3, and you can select to print the plan in landscape format.

A printed version of the plan displayed on the wall creates a good visual representation of the path forward for the team and all stakeholders.

Stay productive on your Android device

Checklists on cards

In February, we introduced checklists on cards as a way to structure the information of the deliverable and manage expectations. This feature is now available in the Projectplace app for Android to help you manage your checklists on the go. Checklists on cards will be coming to the Projectplace app for iOS soon.

Activities in the Android app

You can now also see the activities in the plan in the Projectplace app for Android. Use it to stay on top of your plan while on the go.

We are making Projectplace even better!

Big changes and enhancements are on the horizon for Projectplace. Soon to arrive in the upcoming releases:

- Closer connection between activities and cards to provide even better ways to plan and work
- New, modern look & feel with the most intuitive way to find your way around in the product
- Usability enhancements that increase team engagement and productivity

More information to follow via email and in Projectplace later.

Stay tuned!
